

PREVIOUS VS IMPROVED FILTER DESIGN FEATURES

#399

NAPA Gold 7312 Diesel Oil Filter

There are currently 2 slightly different filter styles available in the field for this part number.

Below are key differences to know:

- While the NAPA filters may look different, all critical dimensions and attributes make the filter fit and function just like OE.
- Both the previous and improved NAPA filter versions fit and function as needed.
- Previous design height: 212mm (*reference*) Improved design height: 193mm (*reference*)

The difference in height between the PREVIOUS design and IMPROVED design are due to (1) the difference in cap height and (2) the addition of a felt disc inside of the cap of the improved design.

- The cap height and updated design features of the IMPROVED NAPA filter match more closely to the OE design for this application.
